

Smoothly Speeding Car Glides Through Southern Maryland and Across Shell Causeway

LATEST HAYNES CAR IS STYLISH

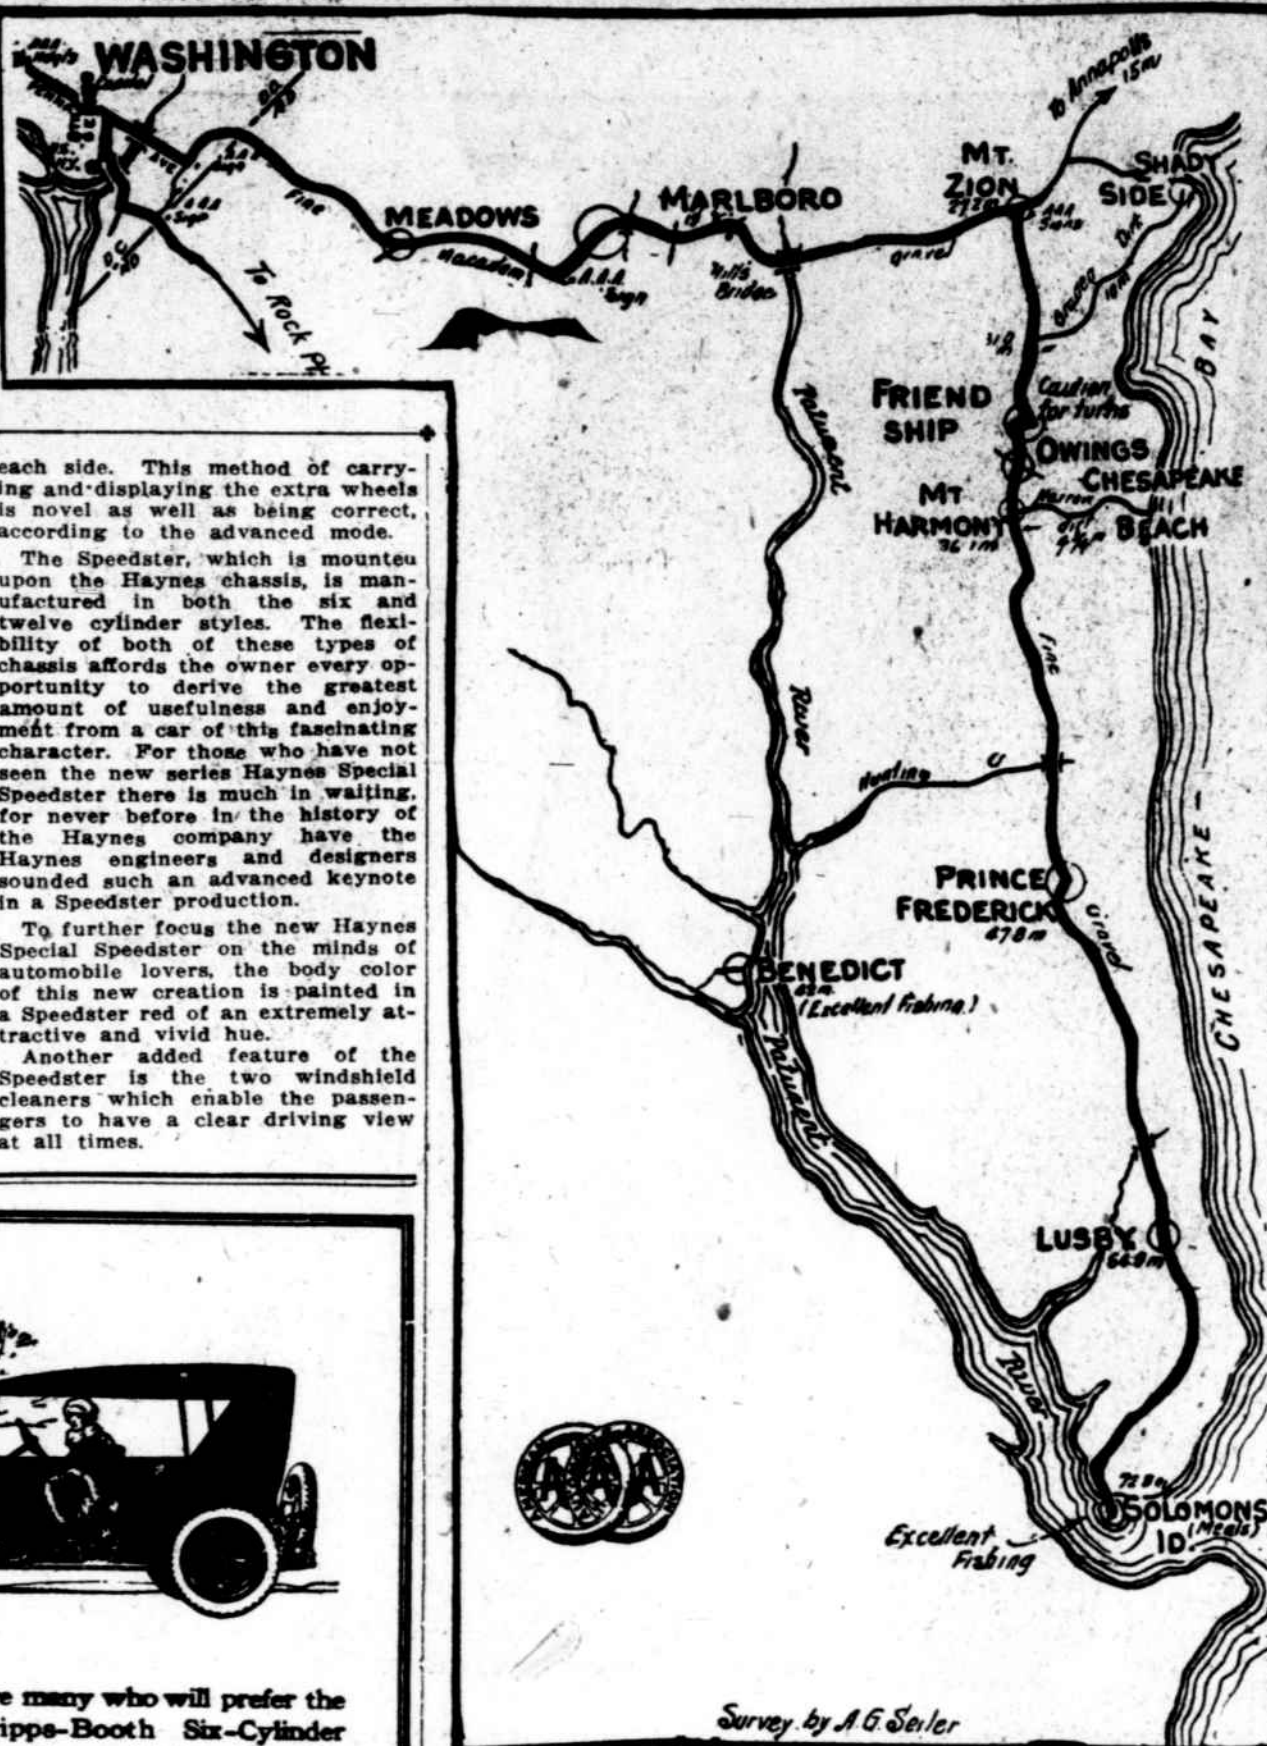

Special Speedster Model
Designed to Please Most
Fastidious.

Motor cars, like fashions, must represent advanced and acceptable ideas. The discriminating public is always seeking newness of style and distinction. Clothes and cars are subject to the trends of public opinion. Therefore, to satisfy the classes who desire the best, it is necessary to produce something new and dignified, which is wholly desirable. So in designing the new series Haynes Special Speedster, the Haynes engineers thought first of the character of the demand and then, of course, carefully planned to meet the wishes of the astute and fastidious motorists. The new Haynes Special Speedster ideally portrays the ingenuity and dexterity of the famous Haynes engineers and designers to forecast motor car fashions and to realize an ideal.

For the youth, the sportsman, the clubman, the golfer, the salesman, the athletic type, and the rest who are desirous of riding in a distinctly new style of car, with new thrills and new sensations, the Speedster fulfills the many expectations to a new degree of enjoyment and satisfaction. The long, sweeping, unbroken lines of the 132-inch chassis reflect the nimbleness and responsiveness of its action and the unusual roadability.

Carries Wire Wheels.
Six wire wheels are regular equipment. Two of the wire wheels are carried at the front—one at

The Herald's tenth automobile tour to the Solomons Island, Maryland, takes the motorist to a spot where he will find excellent fishing and tasty shore meals. The roads are good and the entire trip of approximately 150 miles can easily be negotiated in one day.

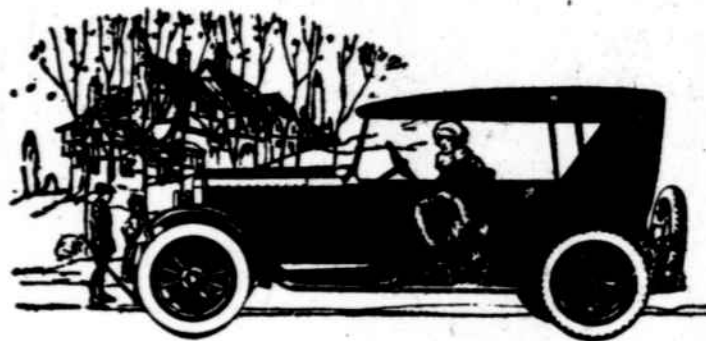

each side. This method of carrying and displaying the extra wheels is novel as well as being correct, according to the advanced mode.

The Speedster, which is mounted upon the Haynes chassis, is manufactured in both the six and twelve cylinder styles. The flexibility of both of these types of chassis affords the owner every opportunity to derive the greatest amount of usefulness and enjoyment from a car of this fascinating character. For those who have not seen the new series Haynes Special Speedster there is much in waiting for never before in the history of the Haynes company have the Haynes engineers and designers sounded such an advanced keynote in a Speedster production.

To further focus the new Haynes Special Speedster on the minds of automobile lovers, the body color of this new creation is painted in a Speedster red of an extremely attractive and vivid hue.

Another added feature of the Speedster is the two windshield cleaners which enable the passenger to have a clear driving view at all times.

THERE are many who will prefer the new Scripps-Booth Six-Cylinder Touring Car for all-year driving. The full-lined top is of genuine Pantalone, acknowledged as one of the finest top materials made.

For occasions when protection is necessary Scripps-Booth provides snug-fitting and easily adjusted curtains which open with the doors and, when not in use are stored without folding, in a special compartment.

Mechanically the new Scripps-Booth has numerous refinements. The Alomite High Pressure Lubricating System simply yet positively greases all necessary points. Easy riding has been assured by longer wheelbase and springs. Throughout there have been added those improvements which make not only for service but also for reliability.

THE SAYERS & SCOVILL COMPANY, CINCINNATI

Peerless Sedan Presented To Inventor by Associates

At the twenty-fourth annual convention of the American Photo Engravers' Association, held in Cleveland, June 17, 18 and 19, a Peerless Sedan was presented to George H. Benedict, of the Globe Engraving and Electrotype Company of Chicago by members of the association in token of the esteem in which Mr. Benedict is held. It was Mr. Benedict who conceived and perfected the present system of arriving at the cost of engravings which is universally used and is known as the "standard scale."

The gift came as a surprise to Mr. Benedict, for the presentation was made during an automobile trip through Cleveland's park system when the entire party made a short stop, ostensibly to view the scenery and have a group photograph taken. Fred W. Gage, president of the Gage Printing Company, of Battle Creek, Mich., and member of the executive committee of the American Photo Engravers' Association, presented the Peerless to Mr. Benedict at the termination of an informal talk which eulogized his services to the association. The presentation was witnessed by over 400 members attending the convention, and they were loud in their congratulations to Mr. Benedict and in their admiration of the Peerless Sedan.

CHAINS APPLIED ON MUDDY ROADS

To do this trick one must have two cross pieces from an old chain and a bit of rubber tubing or hose, a little shorter than the cross chains, to protect the wheel spokes from injury. To apply the chains, lay these latter over the wheel and fasten the ends to the rubber-covered cross chains which have been passed between the spokes. Apply the power to the wheels and the chains will be wound around the tire as is desired.

dict, "high-powered, speedy, comfortable and upholstered like a sitting room. To say that I like it would be putting it too mildly."

Mr. Gage explained that the selection of the Peerless instead of any other high-grade car was the result of careful consideration.

**New York-Chicago
Time Cut Six Hours**

"CANNONBALL" BAKER.

In spite of many difficulties along the road, "Cannonball" Baker, transcontinental auto driver, made a new record run from New York to Chicago. He lowered the old record of 33 hours for the 992 miles to the time of 26 hours 50 minutes. He is shown at the start of the journey.

WORK RUSHED ON NASH PLANT

**Milwaukee Factory Expects
To Produce New Car in
Early Fall.**

With factory buildings nearing completion and much of the machinery installed indications are that the new Nash Four will be produced in the early fall. The new Milwaukee factory of the Nash Motors Company is being equipped with machinery for volume production. The factory, when completed, will comprise a power plant, foundry, machine shop, drop forge department, body-building plant and sheet metal plant. The cost of this plant will run into the millions. The four-cylinder car factory of the Nash Motors Company is a concrete illustration of the growth of the company during the past four years. At the main factory in Kenosha every inch of available ground is utilized in the production of six-cylinder cars and trucks. New buildings have been added during the

past twelve months. With the completion of buildings and the installation of machinery in the Milwaukee plant production of the Nash Four will begin and sample cars, it is expected, will be in the hands of all Nash dealers before snow flies.

LIGHTNING MOTOR FUEL Gives 25 to 35% More Mileage

IF YOU WANT POWER—

More for gasoline dollars—more pep to the engine—a spurt of speed with every move of the throttle—that's the experience of car owners who've learned the gratifying characteristics of Lightning Motor Fuel.

30 Miles on One Gallon of Lightning Motor Fuel Is One User's Record
Requires No Carburetor Adjustment. Autos and Trucks Climb Hills ON HIGH With Lightning That Never Could With Ordinary Gasoline. Lightning Motor Fuel Gives Sturdy Power To Your Motor.

Lightning Motor Fuel Not Only Leaves No Carbon But Actually REMOVES CARBON DEPOSITS

Equally adapted to pleasure and commercial cars.

Lightning Motor Fuel will save your car, as it adds power; it will save you money, as it gives 25 to 35% more mileage.

Ordinary gasoline compares with Lightning like a candle to electricity.

22.7 Miles to Gallon Was Average of a 1919 Six-Cylinder Car on 22.5-Mile Run
To satisfy the increased demand of the public for Lightning Motor Fuel, we have arranged for a wider distribution of this wonderful product. Lightning Motor Fuel may now be obtained at any of the following filling stations:
